

# RICHARD BLAND COLLEGE

EDUCATION | PETERSBURG, VIRGINIA

## CLIENT

Richard Bland College

## PROJECT DESCRIPTION

Richard Bland College expanded its student housing to include residential-style dormitories as well as the creation of an athletic complex. Townes Site Engineering was engaged by the College to take over the Student Village project when issues began to arise during the initial stages of construction. As a follow-up to the Student Village project, the College chose Townes to be the consultant for the on-campus Foundation Athletic Complex. The Townes Team performed all engineering design, survey work, construction stakeout and inspections/testing for the College on this project. Townes also completed an Environmental Impact Review to meet state funding requirements.
